Sherri Young
Secretary of the Board
National Energy Board
Electricity Reliability
444 - 7th Avenue SW
Calgary, Alberta T2P 0X8

Dear Ms. Young:

**RE: National Energy Board (NEB)
British Columbia Hydro and Power Authority (BC Hydro)
Compliance with NEB Order MO-036-2012, Order for Electricity Reliability
Standards
File OF-Fac-ElecGen-Rel-IPL 05**

BC Hydro is writing to the NEB in compliance with Order MO-036-2012 (**Order**) to provide its declaration that it is maintaining the record required under subsection 6(1) of the Order and to provide a copy of the record.

BC Hydro holds authorizations, in the form of International Power Line (**IPL**) Certificates, for NEB regulated IPLs that BC Hydro owns and operates for exporting electricity to the United States (**U.S.**). These authorizations are identified in the Order Appendix as Certificate Nos. EC-III-12, EC-III-04 and EC-III-10 for IPLs designated as 5L51, 5L52 and 2L112 respectively.

BC Hydro declares that it is maintaining a record in the form of Attachment 1 that lists:

- (a) The identity of the provincial authority or standards development authority whose reliability standards the holder of the certificate is complying with for the purposes of sections 3 and 5 of the Order
- (b) The names and reference numbers of the reliability standards that are applicable to the IPLs listed above for which BC Hydro is the certificate holder
- (c) The reasons why BC Hydro is complying with those reliability standards

BC Hydro proposes that reliability standards applicable to IPLs are those that meet the following criteria (**Criteria**):

January 24, 2014
Sherri Young
Secretary of the Board
National Energy Board
Electricity Reliability
National Energy Board (NEB)
British Columbia Hydro and Power Authority (BC Hydro)
Compliance with NEB Order MO-036-2012, Order for Electricity Reliability Standards
File OF-Fac-ElecGen-Rel-IPL 05

1. They are mandatory within a provincial authority framework
2. They are applicable to Transmission Owner (**TO**), Transmission Operator (**TOP**), Transmission Planner (**TP**) and Transmission Service Provider (**TSP**) reliability standard functional registrations within that provincial authority framework

The British Columbia Utilities Commission (**BCUC**) has exclusive authority within British Columbia (**B.C.**), pursuant to section 125.2 of the B.C. *Utilities Commission Act*, to adopt and enforce reliability standards that are developed by the North American Electric Reliability Corporation (**NERC**), Western Electricity Coordinating Council (**WECC**), or other prescribed standard making body. If the BCUC determines that a reliability standard is required to maintain or achieve consistency between B.C. and other jurisdictions that have adopted the reliability standard, these same standards must be adopted in B.C. In order to reject a standard, the BCUC must determine that the standard is not in the public interest in B.C. Further, the BCUC cannot amend any reliability standard developed by the above standard making bodies nor can it, without the approval of the Provincial Government, set a standard or rule pertaining to a matter addressed by a reliability standard that has been assessed. The BCUC generally conducts this standards assessment annually. As a result of this assessment and approval process, there is normally a delay from the date a standard is approved in the U.S. to the date on which it is adopted in B.C.

On March 6, 2013 BC Hydro provided to the NEB its record of the names and reference numbers of the reliability standards that were effective in B.C. on March 6, 2013 and applicable to the IPLs. Attachment 1 outlines the changes to the applicable reliability standards since the March 6, 2013 list was filed. The reliability standards listed in Attachment 1 are approved by the BCUC and effective in B.C. as of January 30, 2014.

BC Hydro is complying with the reliability standards listed in Attachment 1 for the following reasons:

1. The identified reliability standard has been determined by the BCUC to be required to maintain or achieve consistency between B.C. and other jurisdictions that have adopted the reliability standard and has been adopted by the BCUC as a mandatory reliability standard in B.C. under the British Columbia Mandatory Reliability Standard Program (**B.C. MRS Program**)
2. The identified reliability standard applies to one or more of the TO, TOP, TP and TSP functional registrations under the B.C. MRS Program and therefore is applicable to the IPLs for which BC Hydro is the certificate holder
3. BC Hydro is registered for each of the TO, TOP, TP and TSP functions under the B.C. MRS Program and is therefore required to comply with each of the reliability standards for the IPLs for which BC Hydro is the certificate holder

BC Hydro Compliance with NEB Order MO-036-2012

Attachment 1

**BC Hydro's IPLs (International Power Lines)
Standards List**

BC Hydro's IPLs (International Power Lines) Standards List

Prepared by: Reliability Compliance

Date: January 22, 2014

	BC Hydro's IPLs Standards List	Version 1.0
---	--------------------------------	-------------

VERSION CONTROL

Date	Author	Version Number	Stakeholders Consulted	Reason/Comments
Jan 22, 2014	Reliability Compliance	1.0	Legal Regulatory	Initial version. <ul style="list-style-type: none"> • Original list developed for filing to NEB March 6, 2013. • Updated per new BCUC Orders. Changes between the original list and updates indicated with strikethroughs and Notes.

Versioning guide:

Version control shows the dates when a document changes, the person who authored the changes, as well as the reason for the change. Version control allows effective tracking and information for audit purposes.

A two-tiered number versioning system will be used - for example, 1.0 and 2.3.

A major change will require an increase before the decimal, while a minor change means an increase in the number after the decimal.
